REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claim(s), in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in claim(s) 1-25, wherein a lens barrel comprises a first lens assembly and second lens assembly wherein the first and second lens assembly have their respective optical axis, an adjusting mechanism for the first lens assembly which enables translation of the lens optical axis of the first assembly in a direction perpendicular to the optical axis of the lens holder and a second adjusting mechanism for the second lens assembly that enables adjusting an angle of inclination of the lens thereof relative to the optical axis of the lens holder, as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Information Disclosure Statement

2. The information disclosure statement filed 11/13/03 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not

been considered. In the instant case, a copy of the four Japanese patent documents were not provided.

3. The information disclosure statement (IDS) submitted on 11/13/02 has been considered by the examiner, with exception to the four Japanese patent documents which were not provided with the information disclosure statement in accordance with 37 CFR 1.98(a)(2).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following references are cited for disclosing a lens frame having an adjustment mechanism which provides movement of a lens element in a direction perpendicular to the optical axis: Wutherich (4408830) and Bedzyk (5194993).
